

Environmental Policy

As One UD, environmental progress is a key element in our mission to drive prosperity through transport solutions to contribute to Better Life.

The following principles provide direction to our environmental progress:

- Continually reduce the environmental impact of the entire product lifecycle as enabler of sustainability and customer success.
- Each employee will demonstrate responsible care for the environment and build trust by adhering to our core values wherever we operate.
- One UD will raise awareness of laws and regulations and environmental burdens, means to realize a circular economy, and so improve our corporate values.
